Ranajeet Roy

Last updated in April 2026

Data Analyst | Tableau Developer | Data Analytics & Visualization | AI/ML Engineer

ranajeet.professional.work@gmail.com +91 967 253 6268 Delhi, India **Portfolio** LinkedIn GitHub LeetCode

Professional Summary

Data Visualization Analyst with hands-on experience building Tableau dashboards for fraud detection, hospitality demand analysis, KPI reporting, and business performance monitoring. Strong in SQL, Excel, and Python with focus on transforming raw data into executive-ready insights and decision-support dashboards.

Technical Skills

Languages: JavaScript (ES6+), Python, SQL (PostgreSQL, MySQL), HTML5, CSS3

Data Analytics & Visualization: Google Sheets (Pivot Tables, Slicers, KPI Dashboards), Tableau, Matplotlib, Seaborn, Pandas, NumPy, Excel, Data Cleaning, Feature Engineering, EDA

Databases: PostgreSQL, MongoDB, MySQL, Prisma ORM, Google Sheets API, Real-time Databases

AI/ML & GenAI: LangChain, LangGraph, RAG, Fine-Tuning (LoRA, QLoRA), Transfer Learning, Scikit-learn, Tensorflow, Transformers, LLM Integration

Frontend & Backend: React.js, Next.js, Node.js, Express.js, Tailwind CSS, REST APIs, JWT, OAuth 2.0, WebSockets

Featured Projects

Fraud Detection Analysis Dashboard | Live Dashboard — Apr 2026

- Designed a multi-page **Tableau fraud analytics dashboard** integrating transaction, account, network, and time-series datasets to monitor suspicious behavior, fraud patterns, and operational risk across thousands of financial records
- Built executive KPI dashboards **reducing manual fraud review effort** by surfacing high-risk accounts, suspicious transaction clusters, and abnormal behavior patterns
- Built interactive KPI views and advanced visualizations covering **fraud rate trends, risk scoring, abnormal transaction behavior, fraud rings, connected accounts, and actionable high-risk case detection**, enabling end-to-end investigative analysis
- **Stack:** Tableau, Data Visualization, KPI Design, Fraud Analytics, Network Analysis, Dashboard Storytelling, CSV Data Modeling

Hotel Booking Demand Dashboard | Live Dashboard — Apr 2026

- Developed a multi-page **Tableau dashboard** analyzing hotel booking demand patterns, cancellations, customer segments, seasonal trends, and operational performance using hospitality booking data across multiple dimensions
- Designed interactive KPI reports and visualizations covering **booking conversion, cancellation behavior, ADR trends, lead time analysis, market segments, customer types, and occupancy insights**, enabling data-driven revenue and capacity planning
- **Stack:** Tableau, Data Visualization, KPI Design, Hospitality Analytics, Demand Forecasting, Dashboard Storytelling, CSV Data Modeling

nstBuddy.in — Student Q&A Platform | GitHub | Live — Jan 2025

- Architected a high-traffic platform sustaining **1,200+ daily active users** and **200K+ total events**; designed a PostgreSQL schema powering all question storage, upvote aggregation, filter queries, and event tracking — enabling structured data analysis across 65K+ weekly interactions
- Built a live **Google Sheets ↔ PostgreSQL sync pipeline**: questions submitted via Google Sheets are automatically appended to the production database via the Sheets API, providing a non-technical data entry layer and a real-time analytics view over the full dataset
- **Stack:** React.js, Node.js, PostgreSQL, Google Sheets API, WebSocket, Tailwind CSS, Google Cloud

Student Pass/Fail Prediction ML Model | GitHub — Jan 2025

- Developed and deployed a machine learning application to predict whether students are likely to **pass or fail** based on academic and performance-related input features, enabling early identification of at-risk students for timely intervention
- Built an end-to-end workflow covering **data preprocessing, feature engineering, model training, evaluation, and deployment**, transforming predictive outputs into a user-friendly web interface for real-time usage by educators or administrators
- **Stack:** Python, Scikit-learn, Pandas, NumPy, Flask/Streamlit, HTML/CSS, Machine Learning Deployment

Awards & Certifications

View Certificates

1X Hackathon Winner | Data Cron | Data Heist — 2024 – 2025

- DATA HEIST is a campus-wide intelligence operation that blends a cryptic Treasure Hunt with a high-stakes live Auction — all wrapped around your data skills. Teams decode clues, race across campus, bid for strategic advantages, and then face a real dataset challenge.

Education

Newton School of Technology, Rishihood University — Sonipat, Haryana — 2024 – 2028

B.Tech in Artificial Intelligence & Machine Learning (Dual Degree) **CGPA: 9.12 / 10.0**
